*EXAMINER: Initial if reference considered, whether or not citation is in conformance with MPEP 609. Draw line through citation if not in conformance and not considered. Include copy of this form with next communication to applicant. ¹ Applicant's unique citation designation number (optional). ² See Kinds Codes of USPTO Patent Documents at www.uspto.gov or MPEP 901.04. ³ Enter Office that issued the document, by the two-letter code (WIPO Standard ST.3). ⁴ For Japanese patent documents, the indication of the year of the reign of the Emperor must precede the serial number of the patent document. ⁵ Kind of document by the appropriate symbols as indicated on the document under WIPO Standard ST.16 if possible. ⁶ Applicant is to place a check mark here if English language Translation is attached.

This collection of information is required by 37 CFR 1.97 and 1.98. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 2 hours to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.

If you need assistance in completing the form, call 1-800-PTO-9199 (1-800-786-9199) and select option 2.

CONCISE EXPLANATION OF
RELEVANCE OF INFORMATION
SUBMITTED in IDS

Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

Sir:

The references cited on attached forms PTO/SB/08A AND PTO/SB/08B are being called to the attention of the Examiner. Copies of the foreign patent documents and non patent literature references are enclosed. It is respectfully requested that the cited references be expressly considered during the prosecution of this application, and the references be made of record therein and appear among the "references cited" on any patent to issue therefrom.

As provided for by CFR 1.97 (g) and (h), no inference should be made that the information and references cited are prior art merely because they are in this statement and no representation is being made that a search has been conducted or that this statement encompasses all the possible relevant information.

Concise Explanation of Relevance of Information Submitted

In regard to Patent Citation #1, US Patent no. 6,522,749, the invention is intended to provide capabilities of utilizing quantum phenomena for cryptographic purposes. This patent is considered relevant only in the broad sense that this objective is related to some of the objectives of the present applicant's invention, but is not anticipatory of or closely related to the present applicant's invention in forms of operation and hence is not considered to adversely affect the patentability of the present applicant's invention.

In regard to Patent Citation # 2, US Patent # 6,633,053, the invention is intended to provide capabilities of utilizing photons for quantum computing purposes. This patent is considered relevant only in the broad sense that this objective is related to some of the objectives of the present applicant's invention, and in that photons are also utilized in some embodiments of the present applicant's invention, but is not anticipatory of or closely related to the present applicant's invention in forms of operation and hence is not considered to adversely affect the patentability of the present applicant's invention.

In regard to Patent Citation # 3, US Patent # 6,646,727, the invention is intended to provide capabilities of utilizing entangled photons for purposes of making various measurements of optical apparatuses. This patent is considered relevant only in the broad sense that it also utilizes entangled photons as do certain embodiments of the present applicant's invention, but is not anticipatory of or closely related to the present applicant's invention in forms of operation or objectives and hence is not considered to adversely affect the patentability of the present applicant's invention.

In regard to Patent Citation # 4, US Patent # 6,483,592, the invention is intended to utilize entangled photons to transmit information via a "non-local" means. This patent is considered relevant only in the broad sense that it also utilizes entangled photons for quantum mediated communication as do certain embodiments of the present applicant's invention, but it is not anticipatory of or closely related to

the present applicant's invention in form of operation, and hence is not considered to adversely affect the patentability of the present applicant's invention.

In regard to Non Patent Literature Citation # 1, "The Episodic Time Interpretation of Reality", this publication includes a physics theory explication and protocol outlines for testing thereof created by the present applicant. This publication is not prior art in that it was known to and produced by the applicant alone before the filing of the present patent application. It is included herein primarily for purposes of elucidation and elaboration on the theoretical grounds for the present applicant's invention. The present applicant's invention genesis was an outgrowth of the research presented in this citation. This citation, in particular in appendix B on pages 50-60 and Figure VI, details aspects of the theoretical and experimental background for the present applicant's invention, and delineates one approach for implementing a realization of the present applicant's invention (which is also partially present in the present application). Due to its creation by the present applicant, and its lack of public knowledge prior to the filing of the present application, this citation is not considered to adversely affect the patentability of the present applicant's invention.

The present submission is respectfully considered to satisfy the applicant's duty of candor regarding submission of information relevant to patentability of the present applicant's invention, and the concise explanation of relevance of information submitted, though not required, is hoped to be helpful to the Examiner's consideration of the patentability of the present applicant's invention.

Respectfully submitted,

A handwritten signature in black ink, appearing to read "Daniel Klotzer", written over a horizontal line.
